

AI CONSULTING & COORDINATION TECHNOLOGY

Data Management LLC

We've been building AI for over a decade.

Company overview · data-management.co

WHO WE ARE

An AI consulting and coordination-technology company.

We design, build, and operate the **agents, operators, and automation** that run real work — across the tools, data, and systems businesses already use.

- **10+ years** building production AI and data systems
- Consulting-led delivery that ends in **working systems**, not slideware
- We also build our own AI products: **Yupiter** and **Evidloom**

WHAT WE DO

Three ways we create leverage with AI.

AI strategy & advisory

Find where AI creates real leverage, prioritize the highest-value opportunities, and avoid expensive dead ends.

Agent & operator development

Build AI agents that execute multi-step work across browser, files, email, CRMs, and internal tools — with approvals built in.

Automation & coordination

Connect and orchestrate the systems you already run so work flows automatically, on schedule, and across teams.

OUR HISTORY

A decade of shipping AI, not chasing it.

- Began in **enterprise data and machine learning** — cloud pipelines, analytics modernization, and ML-backed decision support
- Evolved into **AI agents and operators** that act across real software, not just chat
- Today: a **consulting + product** company building the coordination technology behind autonomous work
- **50+ systems delivered** across many industries and tool stacks

Agents and workflows that run real work.

Agents & operators

- Lead follow-up operator
- Inbox triage agent
- Research & web-ingestion agent
- Document-to-brief agent
- Whole-computer browser operator
- Scheduling & autonomous-run agent

Automated workflows

- Lead qualification → routing → follow-up
- Email triage → next-action → draft
- Document ingestion → structured brief
- Multi-source research → synthesized packet
- Recurring reporting & delivery
- Scheduled multi-step execution with approvals

OUR DELIVERY MODEL

Assess → Build → Operate & expand.

1 · Assess

Map where AI creates leverage and find the work costing the most time, delay, or revenue.

2 · Build

Design and deploy the smallest useful agent or workflow first, coordinated with your existing systems.

3 · Operate & expand

Measure outcomes, tighten the system, and expand into the next high-value workflow.

OUR PRODUCTS

We build the frontier we sell from.

Yupiter — yupiter.ai

Our AGI-native operator intelligence: the core technology behind agents that can plan and execute real, multi-step work.

Evidloom — evidloom.com

A local-first AI operator that works across your whole machine — apps, browser, terminal, and files — and finishes multi-step workflows.

Our product R&D flows directly into client engagements — so your systems use current technology, not a stale playbook.

WHY WORK WITH US

Not another AI consulting firm.

Most AI consultancies	Data Management
Strategy decks and roadmaps	Working systems in production
Theory about agents	We build our own agent products
Generic playbooks	A decade of real delivery, many stacks
Hand off and leave	Operate, coordinate, and expand with you
AI bolted on the side	AI coordinated across your real tools

PROOF

Credibility built on shipping.

10+ yrs

Building production AI and data systems.

50+

Agents, automations, and workflows delivered.

2

AI products of our own: Yupiter & Evidloom.

LET'S TALK

Interested in working with us?

If you're exploring AI consulting, agent development, or workflow automation, reach out — we'll tell you honestly whether we're the right fit.
